Which scheme to choose?

### Backup method:

Incremental

An incremental backup version stores the changes that have occurred since the last version.

Difference between methods

- Create only incremental versions after the initial full version
- Create a full version after every   incremental versions

Old version cleanup rules:

- Delete version chains older than   days
- Store no more than   recent version chains
- Keep size of the backup no more than   GB
- Do not delete the first version of the backup
